/// AUTONOMOUS WORKFORCE MANAGEMENT

AGENTS THAT ACTUALLY WORK.

Stop building chatbots. Start deploying audit-proof, voice-native agents that orchestrate your business logic in real-time.

AI AGENT CONFIGURATION

A unified studio environment for configuring intelligent chatbots. Define identity, mission, and knowledge base sources to ensure your agent represents your brand perfectly.

Knowledge Base

Connect your agent to your company's documents and data. It learns your identity, mission, and services to provide accurate answers 24/7.

Identity & Mission

Customize your agent's personality and voice. Ensure every interaction aligns with your brand's tone and values.

LATENCY IS THE ENEMY.

Why Axie Agents feel human:

1. Real-Like Voices
Powered by ElevenLabs Turbo v2.5 for emotional nuance.

2. Smart Inerruptions (VAD)
Using *Voice Activity Detection* and standard VAD Barge-in, our agents know exactly when to stop talking and listen, just like a human.

3. Zero Latency
Optimized edge-transport means conversations flow naturally without the "robot pause."
